

Radio Frequency (Non- surgical face lift)

Treatment Theory:

Cooling RF is radio frequency which can penetrate epidermis into deep dermis. The radio frequency motivates water molecules to move at high speed. then produces heat and the temperature reaches to 45-65°C. This leads to subsequent contraction of the collagen tissue and makes the loose skin and wrinkle tightened immediately. moreover, the treatment effect causes collagen re-growth and reconstruction. Meanwhile, it renovates old and damaged collagen, realizes the immediate effect of skin tightening, long-term wrinkle reduction and ease anti-aging.

RF can help treat the following conditions:

- - Enhances luminosity of the skin
- - Face & neck lifting & remodelling
- - A noticeable improvement in skin tone
- - Reduces wrinkles and lift sagging skin
- - Tighten loose skin
- - Increase collagen level
- - A reduction in the appearance of double chins
- - Improves dark circles
- - Body reshaping after post-liposuction treatment
- - Post baby treatment via circumferential reduction
- - Body shaping via cellulite reduction treatment
- - Skin reconstruction: eliminate and tighten the wrinkle for face, neck and back, improve the wrinkle near eye, mouth and nose, increase the skin elasticity.

This treatments is a way to get facial tightening and contouring instantly

Session design:

- No of treatments : 3-6 treatments
- Treatment Interval : once every week
- Treatment Time : 60 min plus post mask or 90 min plus post mask

This is a quick and pleasant Non-Surgical Face Lifting treatment for saggy skin and wrinkles. It correct and prevents aging sign on the face, neck, décolleté, and even both hands. This treatment gives immediate fresh younger looking and revitalizes dull skin for a healthy complexion. 100% patient satisfaction.

This is one of the latest beauty technology applied. When the treatment used on the body, it can perform body slimming which could be incorporated in weight loss program.

What is RF face lift and how does it work?

Radio Frequency face lift is the latest technology to rejuvenate your face without surgery or downtime. The RF treatment handle uses unipolar and bipolar radio frequency modalities to heat subcutaneous dermal tissue using a hand piece emitting RFwaves. This causes the contraction of the existing collagen fibres, encourages fibroblast migration and promotes new collagen growth that helps tightening deep skin tissues. Remarkably, it improves deep blood circulation to give your skin the natural glow and rejuvenates deep skin tissues to restore the bright, youthful shine of clear skin.

This cutting edge technology shorten the treatment cycle 1/20 and maximize the treatment result 5 times than any other traditional or existing beauty equipment.

What kind of results can I expect from Radiofrequency (RF) treatments for skin tightening?

Immediately following the treatment, your skin will feel tighter, with more tightening improvements appearing gradually over a week after treatment. Radiofrequency can also be used to enhance a variety of treatments including [IPL & laser skin rejuvenation](#) and [acne treatment](#).

If there is a significant amount of redundant or sagging skin, often seen in older patients over sixty, combining RF treatments with [Botox and Filler treatments](#), or a surgical face-lift to remove the excess skin, are other options to achieve a better result.

How many treatments required?

In one treatment you can see obvious improvement. But how many treatments required depends on your age and skin problem. If you have more hydrated skin with minor problem, only 3-6 treatments with weekly interval are required.

More problem and aged skin requires 10-15 treatments, but eventually will reach to a non-surgical satisfactory effect.

When should I start my skin tightening treatment?

Try to start as early as you can from around age 35. You will be spending less cost with greater result and looking 10 years younger than your actual age. All those non-surgical treatments are emphasizing maintenance and require good home care regime.

How long before I see the results of the treatment?

You will notice a subtle difference in your skin during your first treatment; however the results get better and better with ever treatment. The treatment is an accumulative result, the more treatments you do the better your results will be. It is normally around 6th treatment for the results to be more drastic.

Is this treatment right for me?

Every woman or man who would like their face to look younger or smoother without surgery is a candidate for this treatment. A person of practically any age can receive the treatment. Some clients have obvious ageing from mid 30s others do better with deeper lines and laxity not evident till the fifties. There is an advantage to starting a little younger (the forties) and planning an annual budget for maintenance.

Are Radiofrequency (RF) treatments painful?

RF treatments are generally comfortable and relaxing. This is one of the reasons for its popularity.

What is the difference between Radiofrequency (RF) and Laser/IPL?

Firstly, RF works by heating up the deeper layers without damaging the skin's surface, and is meant for skin tightening. Laser and IPL work in the upper layers of the skin and is meant for more superficial skin issues such as pigmentation, acne, spider veins, tone and texture.

Secondly, RF treatments are suitable for all skin colors, including dark and pigmented skin. Unlike lasers and IPL, RF energy is “color blind” meaning that it has no affinity to skin pigmentation, such as melanin.

Any side effects?

Best of all, there is hardly any side effects with RF treatment as such waves are very gentle and treatment is almost painless with no down-time at all. In other words, you can hop right back to your normal activities after treatment! What a popular choice for busy professionals who care about their looks.

How should I prepare for a Radiofrequency (RF) treatment?

Avoid doing anything that will irritate your skin immediately before treatment (e.g. sunbathing). Some women find that their skin is more sensitive right before and during their menstrual cycle, therefore ladies: please take this into consideration when scheduling your treatment appointment.

What should you do after a Radiofrequency (RF) treatment?

Generally, no special care is needed after treatment. However it is good to increase the application of moisturizing lotions or creams to the treatment area. Use a hydrating mask as often as you feel is necessary.

Who is not suitable for Radiofrequency (RF) treatments?

- If you have active skin disease or infection in the area treated.
- If you are pregnant.
- If you have an electrical device in your body e.g. pacemakers.

Before and After Radio Frequency face lift treatment
